

# The FFM Delivery Process

- 1. Brief, Analysis, Solution Design** : Define scope & specification through collaborative prototyping (design together the screens that are necessary to deliver the required functionality)
- 2. Development, Testing** : Develop the code that delivers the functionality of the screens within each system system module and make them available for client testing and evaluation
- 3. Migrate, Integrate, Test, Deploy** : Migrate data from legacy systems, integrate with 3rd party systems, final testing and evaluation via soft launch... 'Go Live'
